

FOAM CABINET

TECHNICAL DESCRIPTION

AL AMAN Foam Cabinet is a high-performance fire protection system designed for rapid response to Class A and B fires. Made of galvanized steel, it features a 30-meter hose on a reel, foam proportioner, control valve, and foam pipe, supplied with two 20-liter foam concentrate canisters for reliable and efficient suppression.

SPECIFICATIONS

High-performance fire protection system for Class A and B fires, featuring an ergonomic design for single-user operation. It is ideal for industrial and commercial applications, including gas stations, petrochemical plants, and warehouses.

Key Features:

- High extinguishing efficiency for Fire Classes A & B
- Ergonomic design for easy single-operator use
- Suitable for high-risk fire areas
